~~130 30: SAS® Macro Variables and Simple Macro Programs~~

Introduction to Macro Variables. Macro variables are tools that enable you to dynamically modify the text in a SAS program through symbolic substitution. You can assign large or small amounts of text to macro variables, and after that, you can use that text by simply referencing the variable that contains it. Macro variable values have a maximum length of 65,534

~~Macro Variables:~~

~~Introduction to Macro Variables~~

Using Macro Variables. After a macro variable is created, you typically use the variable by referencing it with an ampersand preceding its name (&variable-name), which is called a macro variable reference. These references perform symbolic substitutions when they resolve to their value. You can use these references anywhere in a SAS program.

~~Macro Variables : Using Macro Variables — Sas Institute~~

Global macro variables are variables that are available during the entire execution of the SAS session or job. A macro variable created with a %GLOBAL statement has a null value until you assign it some other value. If a global macro variable already exists and you specify that variable in a %GLOBAL statement, the existing value remains unchanged.

Macro Programs
the macro variable DSN will
WHERE SEX="&SEX"; be coded
as &DSN. TECHNICAL TIP:
Professional SAS programmers
always refer to the
ampersand as "amper" when
reading code, and only
novice programmers pronounce
the full word. The first
step in understanding macro
variable behavior is to
understand how macro
variables are resolved.

Macro Programs variable, is key to the use of the macro language. With the capability of storing up to 64k bytes of information, you could store a complete program or even the text of a novel within a single macro variable.

~~Five Ways to Create Macro Variables: A ... — Sas Institute~~

And the reason why the title needs to be a macro variable of macro variables is that the %MACRO loops through the data (produces multiple graphs from subsets of input data). And the t1,t2 etc. contains the current value of the "by" variables which are used for the subsetting.

Macro Programs So in other words the title changes throughout the %MACRO itself.

~~Solved: Macro variables inside a macro variable - SAS ...~~

Too often I see hundreds of sas files contain macros with no documentation examples, macro definitions with no relevance, useless macros (for instance why write a mysort() macro rather than use proc sort, it may save you a character or two to type, but if your not the initial programmer then it is not transparent - look up obfuscation), no consistency, and macros which just don't work

~~Solved: sharing variables between macros — SAS Support~~
~~...~~

A macro definition cannot contain a CARDS statement, a DATALINES statement, a PARMCARDS statement, or data lines. Use an INFILE statement instead. By default, a defined macro is an entry in a SAS catalog in the WORK library. You can also store a macro in a permanent SAS catalog for future use.
